Profile

Business & Data Analyst with an interdisciplinary background in Business Analytics, Psychology, and Finance. Experienced in requirements engineering, big data analytics, ETL, agile development, and process optimization. Proficient in Python, SQL, and Machine Learning, enabling data-driven decisions, and development of innovative products.

Work Experience

- 05/2025 – 08/2026 **Business & Data Analyst – Allianz Austria (Insurance)**
Translation of business requirements into user stories and functional specifications.
- Analysis of business processes, system behaviour and software issues.
 - Creation of SQL reports with actionable insights and backend support.
 - Designing of comprehensive overview pages to facilitate sales pitches
 - Acceptance testing, UX improvements and continuous product optimization.
- 10/2022 – 03/2023 **Intern Data & Analytics & Engineering – KPMG Austrian (Audit & Consulting)**
Designing data pipelines & data analysis for financial audit and consulting projects.
- SQL and Python-based extraction, transformation and loading workflows.
 - Standardization and execution of journal entry testing using SSIS.
 - Support for clients regarding ERP systems and data analysis.
- 10/2020 – 03/2022 **Student Assistant Business Location Consulting – ABA Invest in Austria (Consulting)**
Supporting cross-border market expansion projects through data-driven research.
- Web scraping and automated data collection.
 - Market research, lead generation & customer relationship management.
- 10/2018 – 01/2019 **Product Management Trainee – Digital Privacy GmbH (mypio start up)**
Supporting development of a mobile privacy application.
- Requirement engineering, app testing and bug reporting.
 - Data analysis and reporting.

Education

- 10/2020 – 03/2026 **M.Sc. Business Analytics – University of Vienna**
Focus: Banking & Finance, Big Data Analytics, Quantitative Methods, Parallel Computing
Semester abroad: The Hebrew University of Jerusalem (03/2022 – 07/2022)
Thesis: "Improving Exposure Therapy through Robust Off-Policy Reinforcement Learning"
- Training an off-policy reinforcement learning agent for exposure therapy.
 - Combining reinforcement learning with VR and biofeedback concepts.
 - Investigating feasibility of personalized digital therapy solutions.
- 10/2020 – 03/2025 **M.Sc. Psychology – University of Vienna**
Focus: Cognition & Emotion
Thesis: "Evaluating Text Mining for Meta-Analysis in the Field of Psychology"
- Developing a classification model to reduce manual article screening.
 - Achieved 99% recall while reducing workload by 54%.
- 10/2017 – 11/2020 **B.Sc. Business Administration – Vienna University of Economics and Business**
Focus: Finance, Entrepreneurship & Innovation
Semester abroad: Copenhagen Business School (09/2019 – 02/2020)
Thesis: Evaluating the Time Series Momentum Strategy on the German Equity Market
- 10/2015 – 10/2018 **B.Sc. Psychology – University of Vienna**
Thesis: The Link Between Cognitive Ability and Political Attitude in Austria: U-shape?

Skills

Languages	Hebrew (intermediate), English (fluent), Russian (native), German (native)
Programming	Python, SQL, R, MQL (mongoDB), JavaScript, Django
AI	Machine Learning, Reinforcement Learning, NLP, Text Mining, Data Mining
Analytics Tools	Tableau, Amazon QuickSight, Weka, KNIME, Firebase
General Tools	Git, Jira, Confluence, MS Office, Postman & Bruno (API testing), Docker, Claude, ChatGpt

Projects Overview

Data Science

Coding language	Automating exposure therapy to improve mental health treatments – Student/ M.Sc. Python
Problem	Mental health treatments are highly individualized and costly. Especially, patients with anxiety require treatment tailored to their specific needs by a professional therapist.
Solution	Train Reinforcement Learning Agent to perform exposure therapy automatically. Link Agent to VR & bio-feedback sensors for therapy without human therapist intervention.
Results	Obtained therapist agent, which performs exposure therapy automatically. Market potential of 1bin € in Austria over 10 years.
Coding language	Automating article selection for systematic reviews in psychology – Student / M.Sc. R
Problem	Systematic reviews are time-consuming and costly. The article selection can take up to months, depending on the number of articles to be screened by 2 researchers.
Solution	Use text mining to reduce number of articles to be screened by researchers. Only articles classified as selected by ML model are screened manually.
Results	Achieved recall of 99% of articles eligible for inclusion, while saving 54% of workload.
Coding language	Detecting hate speech on social media (X platform) – Student Python
Problem	Public posts might contain harmful hate speech & racism. Huge number of posts make it impossible to evaluate each post by humans.
Solution	Combination of rules-based filter with sentiment analysis to detect hateful posts. Used Negative sentiment and lower scores than control groups as proxies for hate speech.
Results	Approach was implemented but not evaluated due to lack of annotated data.

Visualization

Coding language	Create interactive dashboard with Corona dataset – Student Vue.js and D3.js
Problem	Dashboard had multiple user groups with different needs. Big data may slow down reactivity of interactions.
Solution	Implementation from scratch was created (User stories, 4 figures designed, code).
Results	Interactive dashboard with appealing UI / UX which satisfied the needs of different user groups, and had.
Coding language	Create app to analyze & optimize stock portfolios – Student Python with Django framework
Problem	Private investors usually lack skills & time for professional portfolio optimization.
Solution	Create app with interactive stock plots and a mask to calculate optimal number of each stock to obtain portfolio on efficient frontier.
Results	Basic Web App, where user can enter their own stocks, analyze their portfolio and obtain efficient portfolio weights for each stock.

Data Engineering

Coding language	Data migration & transformation – Student / Intern KPMG Austria Python, SQL, MQL (mongoDB)
Problem	SQL DB needed to be migrated to NoSQL DB and back / financial transactions of clients needed to be imported into OLAP Cube to be analyzed by audit teams.
Solution	Design databases for efficient querying / design script to unpack all data files and retrieve information and import into required in MySQL database scheme.
Results	DB migration achieved / universal python & SQL script to unpack & import data.
Coding language	Data collection on leads & potential customers – Intern ABA Python
Problem	Huge amount of publicly available data on potential customers needed to be collected from LinkedIn & others. Task boring, repetitive and prone to errors.
Solution	Use web scraping to automate and accelerate task.
Results	Saved time and created re-usable solution to facilitate data collection.
